

Pranjal Aswani

Senior Software Engineer • aswani.pranjal@gmail.com • +91 6360226491 • <https://www.linkedin.com/in/pranjalaswani/>

Senior Backend Engineer with 7+ years building low-latency, high-reliability distributed systems across video streaming, cross-border payments, healthcare, and AI products. Strong in Go with hands-on experience in REST APIs, PostgreSQL/MySQL, Kafka/Confluent Cloud, async processing, observability, and performance-focused rollouts. Builds production systems end-to-end - design, implementation, testing, optimization, and operational ownership.

TECHNICAL SKILLS

Languages: Go (Golang), Python, Java, Kotlin, TypeScript, Perl. **Databases:** PostgreSQL, MySQL, SQLite, Elasticsearch. **Backend:** REST APIs, microservices, shared libraries, async jobs, state machines, optimistic locking.

Reliability/Performance: Kafka, Confluent Cloud, LaunchDarkly, Prometheus, Grafana, Locust, Terraform, Airflow. **Testing:** integration tests, staged rollouts, compare-mode validation. **Cloud:** AWS, GCP, K8s.

PROFESSIONAL EXPERIENCE

Senior Software Engineer - JioHotStar (via Proximity Works)

Remote - India Jan 2026 - Present

Go, Kotlin, Kafka, Confluent Cloud, LaunchDarkly, Databricks, Airflow, Terraform

- Built and scaled a Kafka-backed observability pipeline for JioStar's recommendation platform, capturing ranking/boosting/retriever stages in live traffic and **processing 12M+ events/day across 3 services**. Kept the serving path non-blocking with bounded worker pools, circuit-breakered publishing, payload compression, and LaunchDarkly-based staged sampling. Load-tested with Locust, ramped from 1% to 100% traffic over six weeks, and shipped Grafana dashboards plus failure-mode metrics.
- Supported migration from self-managed Kafka to Confluent Cloud for personalization systems - updated consumer services, Spark ETL producers, and internal tooling to authenticate with the new cluster. Restored failing Airflow pipelines by fixing bad-data handling and incorrect Python dependencies.
- Built internal debugging and analysis flows used by engineers investigating recommendation behavior, and enabled cross-region S3 to Databricks reads through transfer-cost modeling and Terraform-provisioned access.

Founding Engineer - BareLab AI skincare adherence

Remote - India May 2025 - December 2025

Python, FastAPI, PostgreSQL, Flutter, GCP (Cloud Run, Cloud SQL)

- Founded and led technical vision for an AI product that personalizes skincare routines using cycle data, hyperlocal weather, and LLM-driven recommendations.
- Built production backend from scratch with FastAPI, PostgreSQL, PyTest, Cloud Run, and Cloud SQL; owned schemas, APIs, deployments, testing, and monitoring.
- Owned end-to-end delivery across data pipelines, multi-LLM integration, prompt tuning, knowledge base creation, mobile integration, release approvals, and production operations.

Software Engineer - Thunes (Cross border Payments)

Singapore/Remote May 2022 - January 2025

Go, Perl, TDD, TypeScript, Vue, PostgreSQL, AWS

- Designed and implemented an audit-compliant **FX trading platform** for treasury execution, settlement, and reconciliation. Modeled trade state machines, balance ledgers with optimistic locking, and real-time event notifications across 7 services.
- Led 20-month migration of a high-throughput **transaction status pipeline from Perl to Go**. Built partner-based dynamic routing, handled reversals and ambiguous states, and used feature-flagged staged rollout to eliminate regression risk.
- Built an **async scheduled job processor in Go** for partner balance reconciliation, automated SFTP transfers, and leaky-bucket rate limiting for held transactions. Added Prometheus metrics for operational monitoring.
- Led 6-month migration of legacy contact management** into a central shared service used by 6 services. Built bulk upload APIs, shipped incremental feature-flag rollout, and validated data consistency before cutover.
- Refactored quotation REST APIs (V1/V2) to Go for real-time cross-border pricing. Added integration tests with mocked dependencies and production compare-mode proxying against legacy Perl responses via JQ for zero-regression releases.
- Consolidated FX rates, trades, balances, and observability helpers into a shared Go library adopted across 6 services. **Led Go runtime upgrades from 1.18 to 1.22 platform-wide**, improving performance and security.

Tech Lead 10xers.co Software Consulting

Remote - India December 2020 - April 2022

Go, PostgreSQL, Git, Jira, Bitbucket, AWS

- Architected Passion.do backend:** Built Go (Gin), PostgreSQL, and AWS services for creator monetization, content delivery, group classes, pre-recorded videos, and Stripe Connect payments.
- Fintech product delivery:** Led end-to-end backend delivery for fintech and e-commerce MVPs in MENA with ownership across design, implementation, APIs, and production support.
- Engineering leadership:** Established engineering foundation for the company, recruited early engineers, led reviews, and mentored junior developers through implementation patterns and delivery practices.

ML Engineer Halodoc Healthcare for Indonesia

Bengaluru, India July 2019 - November 2020

Python, TDD, Jupyter, Scikit Learn, Pandas, AWS, Microservices

- KTP geo-location pipeline:** Built data pipeline from patient identity cards, enabling Indonesian government teams to identify COVID-19 hotspots and optimize rapid test allocation.
- NLP consultation classifier:** Developed classification system for SOAP notes and chat logs, automating quality scoring and supporting medical compliance tracking.
- Internal labeling tools:** Built Ops tooling that reduced time to clean and tag anonymized datasets for model training.

Software Development Engineer Halodoc Healthcare for Indonesia

Bengaluru, India September 2018 - June 2019

Java, MySQL, AWS, Microservices

- Maintained Halodoc's tele-consultation platform, shipping features, fixes, and reliability improvements across 5 Java/MySQL microservices every sprint.
- Integrated Midtrans payment gateway for tele-consultation.
- Built V1 search** for halodoc.com using Elasticsearch.

Google Summer of Code Community Health Analytics and Open Source Software (CHAOSS)

May 2018 - August 2018

- Built report-generation tooling with GrimoireLab libraries to create PDF health/performance reports for FOSS communities from GitHub/GitLab, mailing lists, JIRA, and Bitbucket data.

Bachelor of Engineering (2014-18)

Mumbai University (8.45/10 CGPA)

President: FOSS society 2017 - 2018
